HEAT RECOVERY AIR HANDLING UNIT

Freshbox 100 WiFi

EN USER’S MANUAL
SAFETY REQUIREMENTS

- Disconnect the unit from power mains prior to any installation operations.
- The unit must be grounded!
- Unpack the unit with care.
- While installing the unit, follow the safety regulations specific to the use of electric tools.

UNIT INSTALLATION AND OPERATION SAFETY PRECAUTIONS
• Do not change the power cable length at your own discretion. Do not bend the power cable. Avoid damaging the power cable. Do not put any foreign objects on the power cable.

• Do not use damaged equipment or cables when connecting the unit to power mains.

• Do not touch the unit controls with wet hands. Do not carry out the installation and maintenance operations with wet hands.

• Do not lay the power cable of the unit in close proximity to heating equipment.

• Do not operate the unit outside the temperature range stated in the user’s manual. Do not operate the unit in aggressive or explosive environments.

• Do not wash the unit with water. Protect the electric parts of the unit against ingress of water.

• Do not operate the unit outside the temperature range stated in the user’s manual. Do not operate the unit in aggressive or explosive environments.

• Do not allow children to operate the unit.

• Do not store any explosive or highly flammable substances in close proximity to the unit.

• Disconnect the unit from power mains prior to any technical maintenance.

• When the unit generates unusual sounds, odour, or emits smoke, disconnect it from power supply and contact the Seller.

• Do not open the unit during operation.

• Do not direct the air flow produced by the unit towards open flame or ignition sources.

• Do not block the air duct when the unit is switched on.

• In case of continuous operation of the unit, periodically check the security of mounting.

• Do not sit on the unit and avoid placing foreign objects on it.

• Use the unit only for its intended purpose.

THE PRODUCT MUST BE DISPOSED SEPARATELY AT THE END OF ITS SERVICE LIFE. DO NOT DISPOSE THE UNIT AS UNSORTED DOMESTIC WASTE.
PurposE
Due to the ability to save heating energy by means of energy recovery, the unit is an important element of energy-efficient premises. The unit is a component part and is not designed for stand-alone operation. The unit is designed to ensure continuous mechanical air exchange in houses, offices, hotels, cafés, conference halls, and other utility and public spaces as well as to recover the heat energy contained in the air extracted from the premises to warm up the filtered stream of supply air.

THE UNIT SHOULD NOT BE OPERATED BY CHILDREN OR PERSONS WITH REDUCED PHYSICAL, MENTAL, OR SENSORY CAPACITIES, OR THOSE WITHOUT THE APPROPRIATE TRAINING.

THE UNIT MUST BE INSTALLED AND CONNECTED ONLY BY PROPERLY QUALIFIED PERSONNEL AFTER THE APPROPRIATE BRIEFING.

THE CHOICE OF UNIT INSTALLATION LOCATION MUST PREVENT UNAUTHORIZED ACCESS BY UNATTENDED CHILDREN.

It is rated for continuous operation. Transported air must not contain any flammable or explosive mixtures, evaporation of chemicals, sticky substances, fibrous materials, coarse dust, soot and oil particles or environments favourable for the formation of hazardous substances (toxic substances, dust, pathogenic germs).

Freshbox 100 ERV WiFi

Equipped with a Wi-Fi module
Heat exchanger type
- by default
ERV – enthalpy
Rated air flow [m³/h]
Series
The unit is designed for indoor application with the ambient temperature ranging from +1 °C (+34 °F) up to +40 °C (+104 °F) and relative humidity up to 70 %. The unit is rated as a Class I electrical appliance. Hazardous parts access and water ingress protection rating:
- IP44 for the unit motors
- IP 22 for the assembled unit connected to the air ducts

The unit design is constantly being improved, thus some models may be slightly different from those described in this manual.

---

**TECHNICAL DATA**

The extract air temperature should be no higher than +40 °C and relative humidity should not exceed 70 % over the entire temperature range.

- **Transferred air temperature [°C] [°F]**: from -25 °C (-13 °F) up to +40 °C (104 °F)
- **Casing material**: painted steel
- **Insulation [mm] [inch]**: foam rubber, 10 (2/5”)
- **Heat recovery efficiency [%]**: 96 | 94 | 92 | 89 | 87 | 96 | 94 | 92 | 89 | 87
- **Heat exchanger type**: counter-flow
- **Heat exchanger material**: polystyrene | enthalpy membrane
- **Supply filter**: G4 (MERV 6), F8 (MERV 14)
- **Extract filter**: G4 (MERV 6)
- **Connected air duct diameter [mm] [inch]**: Ø 100 (Ø 4”)
- **Weight [kg] [lb]**: 31 (68) | 31 (68)
DESIGN AND OPERATING PRINCIPLE

Warm stale extract air from the room flows to the unit, where it is filtered by the extract filter, then air flows through the heat exchanger and is exhausted outside by the extract fan.

Cold fresh air from outside flows into the unit, where it is cleaned by the supply filter. Then filtered air flows through the heat exchanger and is moved to the room with the supply fan.

Thermal energy of warm extract air is transferred to clean intake fresh air from outside and warms it up. The air flows are fully separated. Heat recovery minimizes heat losses, which reduces the cost of space heating in the cold season.

Temperature differences between supply and extract air flows in units with polystyrene heat exchangers lead to condensate formation. Condensate is collected in the drain pan and is removed outside by the drain pipes through the exhaust air duct.

Condensate is not formed in units equipped with an enthalpy heat exchanger as moisture is transferred from one air flow to another through a membrane.
INSTALLATION AND SET-UP

READ THE USER'S MANUAL BEFORE INSTALLING THE UNIT.

WHILE INSTALLING THE UNIT ENSURE CONVENIENT ACCESS FOR SUBSEQUENT MAINTENANCE AND REPAIR.

Minimum distances from the unit to the surfaces

min 300 mm

min 11 13/16"

min 300 mm

min 11 13/16"

The louvre shutters open automatically when the motors are switched on and close when the motors are switched off.

*An additional extract spigot can be fitted to the unit to connect the exhaust air duct from additional premises, e.g. a bathroom. The spigot is included in the delivery set.
ADDITIONAL HOLE!
DRILL UPON CUSTOMER’S REQUEST ONLY!
Ø 120 mm (4 3/4") hole for Ø 100 mm (3 15/32") air duct
Fill the gaps between the wall and the air ducts with a mounting foam

4 holes (Ø 8 5/16")
and 90 mm (3 5/16") deep)
in the wall made using a mounting template

2 holes Ø 120 mm (4 3/4") hole for Ø 100 mm (3 15/32")
Fill the gaps between the wall and the air ducts with a mounting foam

HOLE SPACING TEMPLATE

ADDITIONAL HOLE!
DRILL UPON CUSTOMER’S REQUEST ONLY!
Ø 120 mm (4 3/4") hole for Ø 100 mm (3 15/32") air duct
Fill the gaps between the wall and the air ducts with a mounting foam

POWER CABLE ENTRY

Before mounting make sure the casing does not contain any foreign objects (e.g. foil, paper).

The unit must be mounted on a plane surface.
Mounting of the unit to an uneven surface can lead to the unit casing distortion and operation disturbance.

1. Mark and drill holes in the wall using a mounting template.
Fix the mounting template at the required level on the wall with a self-adhesive tape.
Using a mounting template make marks to drill holes for air ducts, for unit mounting and for power cable entry.
Before installation operations route necessary cables and wires to the unit mounting place.
2.1. Remove the mounting template and drill two through holes Ø 120 mm (Ø 4 3/4") for round air ducts. When mounting the unit with an additional extract spigot, prepare a hole in the wall for a connecting bend and for laying of a rectangular air duct. A connecting bend, rectangular and round air ducts are available separately. Drill holes (Ø 8 mm (Ø 5/16"), 90 mm (3 9/16") deep) to mount the unit. Install the expansion anchors, remove the perforated fillers for the air ducts from the mounting template and install the mounting template back using a self-adhesive tape.

2.2. Cut air ducts of required length. Note that the telescopic air duct end must protrude for the distance that enables installation of the outer ventilation hood. For details, refer to the installation instruction for the ventilation hood. The outer ventilation hood is available separately.

3. Fix the mounting template on the wall to install the air ducts. Insert the air ducts in the corresponding holes of the mounting template. Install the air duct with the minimum slope of 3 mm (1/8") for condensate removal. To install the unit with an additional spigot, insert the connecting bend into the prepared hole in the wall, aligning the mounting template hole with a round end of the connecting bend. Connect a rectangular duct to the connecting bend.

4. Fill the spaces between the air ducts and the wall with a mounting foam through the specially designed holes in the mounting template. Wait till the mounting foam hardens then take off the mounting template and remove the foam excess. Cut off the protruding air duct parts to be flush with the wall surface.
5. To install an additional extract spigot, remove the plug on the rear part of the unit. Undo the screws, remove the plug and fix a spigot on its place using screws.

6. Fix the unit on the wall:
   - Open the unit and remove the heat exchanger.
   - Lift the unit, insert the drain pipe and unit spigots into the corresponding wall-mounted air ducts.

   **CAUTION! REMOVE THE MAGNETIC PLUG FROM THE EXHAUST GRILLE IF AN ADDITIONAL EXTRACT SPIGOT IS NOT INSTALLED.**

   - Fix the unit on the wall using the supplied screws and expansion anchors.
   - Install the heat exchanger back and close the unit door.

7. Install the outer ventilation hood:
   - Cut a part of the drain pipe protruding outside to a length not more than 10 mm (3/8").
   - Remove the foam excess.
   - Fill the gaps between the air ducts with sealant.
   - Fix the outer hood on the outer wall of the building (see the ventilation hood installation manual).
**CONNECTION TO POWER MAINS**

**POWER OFF THE POWER SUPPLY PRIOR TO ANY OPERATIONS WITH THE UNIT.**
**THE UNIT MUST BE CONNECTED TO POWER SUPPLY BY A QUALIFIED ELECTRICIAN.**
**THE RATED ELECTRICAL PARAMETERS OF THE UNIT ARE GIVEN ON THE MANUFACTURER’S LABEL.**

- The unit is rated for connection to 1~110-240 V/50 (60) Hz power mains.
- The unit must be connected to power mains using insulated electric conductors (cables, wires). The actual wire cross section selection must be based on the maximum load current, maximum conductor temperature depending on the wire type, insulation, length and installation method.
- The external power input must be equipped with an automatic circuit breaker built into the stationary wiring to open the electric circuit in case of overload or short-circuit. The circuit breaker installation place must provide quick access for emergency shutdown of the unit. The trip current of the automatic circuit breaker QF must exceed the maximum current consumption of the unit (refer to the technical data table). The recommended trip current of the circuit breaker is the next current in the standard trip current row following the maximum current of the connected unit. The automatic circuit breaker is not included in the delivery set.

CONTROL

The unit is controlled by means of a control panel on the unit casing, a remote control or via mobile application.

1. The unit is switched on/off using \( \text{button} \).
2. Ventilation modes can be controlled by the \( \text{and} \) buttons.
   The \( \text{and} \) buttons change the ventilation mode within five speeds.
   Pressing \( \text{and} \) simultaneously for more than 3 seconds switches the timer on/off. The time of the timer and the speed to which the installation proceeds while the timer is running is adjusted via the mobile application.
3. The weekly schedule can be switched on/off by pressing the \( \text{button}.\)
   For this mode, the time must be correctly set via the mobile application.
   By default, the controller stores a weekly schedule with factory settings.
   The button for switching on the weekly schedule blocks the buttons for changing speeds.
4. The Wi-Fi module is switched on/off using \( \text{button}.\)
   Switch the Wi-Fi module on/off by pressing \( \text{button}.\) If the button is held down for more than 5 seconds, its backlight flashes and the controller goes to the «Setup Mode» (for more information on this mode, see page 16).
5. At the end of the filters’ service life, the filter replacement indicator \( \text{on the control panel will light up notifying that filters need to be changed.\)

CAUTION! After switching off the unit with the heater running, the fans continue to operate in order to cool the heater. The turn-off delay time of the fans is 0.5-2 minutes depending on the unit model.
6. In emergency situations, the unit turns off and the indicator flashes an alarm code.

Following message is displayed if launching an application without connection to the unit:

![Image](image-url)

After installing the application, connect the mobile device to the unit as to a Wi-Fi access point (FAN: + 16 characters of the ID number) indicated on the control board and on the unit casing.

By default, the Wi-Fi access point password is 11111111 (eight ones).

Run the installed application on the mobile device connected to the unit.

- Select a desired connection type.
- Enter the app menu.
- Select **CONNECTION - AT HOME**.
- If the mobile device is connected to the Wi-Fi access point of the unit without a router, select the Default connection.
- If you are connecting via a router, search for devices in the network by pressing the button.
- Select the connection with the required ID number.
- Edit the connection details by pressing .
- If necessary, re-name the connection and enter a unit password (characters allowed: 0…9, a…z, A…Z).
- By default the unit password is 1111 (four ones).
- Confirm the updated details by pressing .
Unit password change
- Go to Menu - Connection - At home.
- Choose the connection and press.
- Enter and confirm the password. Characters allowed: 0…9, a…z, A…Z.
- Press the ‘Change Password’ button.

Wi-Fi parameter setup
Go to the application menu on your mobile device Menu - Connection – Wi-Fi setup.

Then press Receive. The screen will display the current Wi-Fi parameter settings.
Select one of the Wi-Fi operation modes: Access Point or Client.

Access Point: access point mode without a home router.
Up to 8 devices can be connected to the unit in this mode.
Select the desired security level for the Access point mode:
Open: without a password.
WPA PSK: password-protected.
WPA2 PSK: password-protected.
WPA/WPA2 PSK: password-protected (recommended).

Enter your access point password.
Change the Wi-Fi channel if necessary.
Press the APPLY button.
**Client** – the unit operates on the home router network. Enter the home router details and the IP address type for the **Client** mode:

- Enter the name of the Wi-Fi home router access point.
- Enter the password for the Wi-Fi home router access point.

Select an IP address type:

- **DHCP**: the IP address is set up automatically upon connection to the home router (recommended).
- **Static**: enables manual entry of the desired IP address, subnet mask and default gateway. These settings are recommended for expert users only. Select this IP address type at your own risk. Then press the **APPLY** button.

**Special Setup mode**

In the event of losing the Wi-Fi password or the unit password, connecting external devices or in other cases use the special **Setup mode** to restore access to the unit functions.

To enter the special Setup mode, press and hold the Wi-Fi button on the control panel for 5 seconds before the LED on the button starts flashing.

The unit will continue in this mode for 3 minutes and then automatically revert to the previous settings.

To immediately exit the Setup mode, press and hold the button again for 5 seconds until the LED on the button stops flashing.

To connect to the unit in the **Setup Mode**, the following parameters are available:

- **Wi-Fi name**: Setup mode.
- **Wi-Fi password**: 11111111.
- The unit password is ignored.

**Cloud server connection**

The units can be controlled using the mobile app via a cloud server connection. This function allows controlling the unit that is connected to the home router, at any remote location via the Internet. By default the Control via cloud server function is disabled.

To enable the function:

- Select **CONNECTION - AT HOME**.
- Select the desired unit connection.
- Enter the connection settings menu.
- Enable control Through cloud server.

**WARNING!** With this function enabled any loss of Internet connection provided by the home server may result in temporary loss of communication with the unit.

Create a new account or login to a previously created to manage the unit.
Open the mobile app and go to MENU -> CONNECTION -> THROUGH CLOUD SERVER:

- Press the **ADD NEW ACCOUNT** button.
- Enter a login, a password and an e-mail address for password recovery. Confirm the updated details by pressing ✅.
- Follow the link sent to the e-mail.
- Enter your login and password to enter your account.
- Add a new connection by clicking the ✚ button.
- Enter an arbitrary unit name, its ID number (indicated on the control board and the casing of the unit), and also the device password (default: 1111).
- Confirm the updated details by pressing ✅.
- To exit the account, press 📨.

Menu structure

**Home page**

<thead>
<tr>
<th>Sensor readings:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Temperature</strong></td>
</tr>
</tbody>
</table>
Control buttons:

1. Unit on/Standby.
2. Selection of pre-set speed.

Timer activation. Timer settings are made in the Basic Settings - Timers menu.

Week-scheduled operation mode activation. The settings of this mode are made in the Basic settings - Schedule menu.

Recirculation — Activation of the recirculation mode. If there is no recirculation mode, the button is inactive.

Basic settings

Timers

Main timer: Timer mode settings. When the timer is activated in the Home page menu, the unit temporarily goes to the following settings:

1. Selection of pre-set speed 1-5, Standby

00:30 — Timer setting

Control temperature selection. Available +15 °C. + 30 °C, off. If OFF is selected, temperature control will not be performed while the timer is running.

Boost turn-off delay: determines the turn-off delay time for the Boost mode after the signal at the digital input (Boost switch) disappears on the control board.

Boost turn-on delay: determines the turn-on delay time for the Boost mode after the signal is applied to the digital input (Boost switch).

Schedule

The weekly schedule can be set by means of 4 time intervals available for each day of the week. Adjustment can be made for every day, weekdays, weekends or for the whole week. When the Weekly Schedule mode is activated from the Main page, the unit will operate as scheduled according to the following parameters:

1. Selection of pre-set speed 1-5, Standby

06:00 - 09:00 — Time setting for a specific segment.

Control temperature selection. Available +15 °C. + 30 °C, off. If OFF is selected, temperature control will not be performed while the timer is running.
Date and time
Current time and date are displayed and adjusted in this menu.
Time display format: hh:mm:ss.
Date format: dd.mm.yyyy.

— To enter the time and date manually.

— The same time as in the mobile device will be automatically set.

Filter
Filter timer setup: When the set time (70-365 days) has elapsed, the filter change indicator appears and filter replacement information is displayed in the Alarms menu.
Total operation time: Displays the running time of the unit, which cannot be reset.

Other
The backlight brightness changes dynamically, after releasing the button, the brightness decreases to a preset level.
Sound: turns on/off the sound projector located on the boar.
Engineering menu

Air flow rate
Air flow rate, preset speed 1-5 and Boost mode are set in this section.

Sensors
This section displays the current status of all sensors:
- outdoor air temperature.
- supply air temperature.
- extract air temperature upstream of the heat exchanger.
- exhaust air temperature downstream of the heat exchanger.

Boost mode sensor
Fire alarm sensor

Firmware
This section displays the current version and date of the controller and control board firmware.
Factory settings

In this section you can reset your settings to the factory settings. Communication with the unit may be lost after restoration. If necessary, reset your Wi-Fi connection.

Alarms

This section displays alarms and warnings. Alarms are highlighted in red, warnings are highlighted in black.

- **Alarm** – indicates a serious error in operation. The unit is forcibly turned off. The alarm is reset manually using the **Reset the alarms** button.
- **Warning** - the unit is not forcibly turned off. Warnings are reset automatically after the cause is eliminated.

TECHNICAL MAINTENANCE

DISCONNECT THE UNIT FROM POWER SUPPLY BEFORE ANY MAINTENANCE OPERATIONS!

Maintenance operations of the unit are required 3-4 times per year. Maintenance includes periodic dust removal from surfaces, cleaning and replacement of filters and dry cleaning of fans.

Maintenance includes general cleaning of the unit and the following operations:

1. Filter maintenance (3-4 times per year).
   Dirty filters increase air resistance in the system and reduce supply air volume.
   Remove the clogged filters from the unit.
   Clean the MERV 14 filter with a vacuum cleaner.
   To remove the MERV 6 filters for cleaning remove the flexible clamps fixing them and pull the filters until they slide off the guides.
   Clean the filters with water and let them dry. After complete drying reassemble the filters in the reverse order.
   Install the filters back to the unit.
   The filters require cleaning not less than 3-4 times per year.
   For new filters contact the Seller.

2. Heat exchanger maintenance (once a year).
   Some dust may accumulate on the heat exchanger block even in case of regular maintenance of the filters.
   To maintain the high heat recovery efficiency, regular cleaning is required.
   Periodical dry cleaning is recommended. Use a vacuum cleaner with a narrow nozzle.
   Remove the clogged heat exchanger out of the unit, clean it with a vacuum cleaner and install the heat exchanger back to the unit.
3. Fan maintenance (once a year)
Even in case of regular maintenance of the filters, some dust may accumulate inside the fans and reduce the fan performance and supply air flow.
Clean the fan with a cloth or a soft brush.
Do not use water, aggressive solvents, or sharp objects as they may damage the impeller.

4. Technical maintenance of the supply grille (twice a year)
The supply grille may get clogged with leaves and other objects which may reduce the unit performance.
Check the supply grille twice per year and clean it as required.

5. Technical maintenance of air duct system (every 5 years)
Even regular fulfilling of all the prescribed above maintenance operations may not completely prevent dirt accumulation in the air ducts which reduces the unit capacity.
Duct maintenance means regular cleaning or replacement.

---

### STORAGE AND TRANSPORTATION REGULATIONS

- Store the unit in the manufacturer’s original packaging box in a dry closed ventilated premise with temperature range from +5 °C (+41 °F) to +40 °C (+104 °F) and relative humidity up to 70 %.
- Storage environment must not contain aggressive vapors and chemical mixtures provoking corrosion, insulation, and sealing deformation.
- Use suitable hoist machinery for handling and storage operations to prevent possible damage to the unit.
- Follow the handling requirements applicable for the particular type of cargo.
- The unit can be carried in the original packaging by any mode of transport provided proper protection against precipitation and mechanical damage. The unit must be transported only in the working position.
- Avoid sharp blows, scratches, or rough handling during loading and unloading.
- Prior to the initial power-up after transportation at low temperatures, allow the unit to warm up at operating temperature for at least 3-4 hours.
MANUFACTURER’S WARRANTY

The product is in compliance with EU norms and standards on low voltage guidelines and electromagnetic compatibility. We hereby declare that the product complies with the provisions of Electromagnetic Council Directive 2014/30/EU, Low Voltage Directive 2014/35/EU and CE-marking Directive 93/68/EEC. This certificate is issued following test carried out on samples of the product referred to above. The manufacturer hereby warrants normal operation of the unit for 24 months after the retail sale date provided the user’s observance of the transportation, storage, installation, and operation regulations. Should any malfunctions occur in the course of the unit operation through the Manufacturer’s fault during the guaranteed period of operation, the user is entitled to get all the faults eliminated by the manufacturer by means of warranty repair at the factory free of charge. The warranty repair includes work specific to elimination of faults in the unit operation to ensure its intended use by the user within the guaranteed period of operation. The faults are eliminated by means of replacement or repair of the unit components or a specific part of such unit component.

The warranty repair does not include:
- routine technical maintenance
- unit installation/dismantling
- unit setup

To benefit from warranty repair, the user must provide the unit, the user’s manual with the purchase date stamp, and the payment paperwork certifying the purchase. The unit model must comply with the one stated in the user’s manual. Contact the Seller for warranty service.

The manufacturer’s warranty does not apply to the following cases:
- User’s failure to submit the unit with the entire delivery package as stated in the user’s manual including submission with missing component parts previously dismounted by the user.
- Mismatch of the unit model and the brand name with the information stated on the unit packaging and in the user’s manual.
- User’s failure to ensure timely technical maintenance of the unit.
- External damage to the unit casing (excluding external modifications as required for installation) and internal components caused by the user.
- Redesign or engineering changes to the unit.
- Replacement and use of any assemblies, parts and components not approved by the manufacturer.
- Unit misuse.
- Violation of the unit installation regulations by the user.
- Violation of the unit control regulations by the user.
- Unit connection to power mains with a voltage different from the one stated in the user’s manual.
- Unit breakdown due to voltage surges in power mains.
- Discretionary repair of the unit by the user.
- Unit repair by any persons without the manufacturer’s authorization.
- Expiration of the unit warranty period.
- Violation of the unit transportation regulations by the user.
- Violation of the unit storage regulations by the user.
- Unit breakdown due to circumstances of insuperable force (fire, flood, earthquake, war, hostilities of any kind, blockades).
- Missing seals if provided by the user’s manual.
- Failure to submit the user’s manual with the unit purchase date stamp.
- Missing payment paperwork certifying the unit purchase.

FOLLOWING THE REGULATIONS STIPULATED HEREIN WILL ENSURE A LONG AND TROUBLE-FREE OPERATION OF THE UNIT.

USER’S WARRANTY CLAIMS SHALL BE SUBJECTED TO REVIEW ONLY UPON PRESENTATION OF THE UNIT, THE PAYMENT DOCUMENT AND THE USER’S MANUAL WITH THE PURCHASE DATE STAMP.
## Certificate of Acceptance
